

IT Helpdesk Portfolio

By Benson Huynh

 IT HelpDesk Portfolio Tickets

This report contains a collection of resolved IT tickets to support and demonstrate the understanding and troubleshooting of the relevant skills necessary for IT Helpdesk or Technical Support

Each Ticket is documented as followed:

- Issue Description
- Troubleshooting
- Steps taken
- Final resolution

Ticket #1 - Customer Support PC is completely dead, agent can't take calls

Issue Description:

My desktop on the Customer Support floor won't turn on at all this morning. No lights, no fan, nothing when I press power. I have a full queue of calls waiting and I can't do anything until I have a working machine.

Troubleshooting performed by user: - Pressed the power button several times - Checked the wall outlet with another device (it works) - Completely dead, no lights, no fan, no beep

Business Impact: Customer Support agent offline; calls queueing with no one to take them.

1. After confirming through user authentication and no physical damage to the Laptop. The customer states the laptop cannot function due to full disk.
2. Deduce that a critical hardware issue is preventing the customer support team member from operating since the pc is completely unresponsive.
3. Escalate for replacement and repair due to the business impact.

Final Resolution: Laptop was experiencing hardware issue, escalate for replacement and repair

Ticket #2 - Can't get to any of my work files from home

Issue Description: I'm at home today and none of my drive letters work. They all say "The network path was not found." Internet and email are fine. I had no problem last week in the office.

Troubleshooting performed:

- Internet and email work
- Restarted my computer

Business Impact:

Cannot access any project files, shared templates, or department resources. Multiple deadlines this week.

1. Authenticate customer, conclude it is a V{N cloud network issue
2. Use remote support and login with domain credentials
3. Open File Explorer and confirm problem
4. Open VPN and reconnect
5. Open Documentation and note the department UNC path under "File Server"
6. On the remote desktop - open file explorer - this PC - ... see more - "map network drive"
7. Select the drive letter, enter the UNC path, and click "Map Drive"
8. Confirm the drive opens for the user

Ticket #3 - New phone - need help setting up company email

Issue Description:

Just got a new phone and need to add my work email. The default settings aren't connecting and I don't know what server info to use. Have never set this up before on this device.

Troubleshooting performed:

- Phone has internet connection
- Personal email works fine on the phone

Business Impact:

Cannot check work emails on the go.

1. Confirm with customer of current ongoing ticket
2. Look into documentation station and find the mobile email set up
3. Send in the IOS: iOS: How to Navigate to Server Settings instructions to the customer

4. Walk them through it carefully and patiently
5. Ensure customer has no other issue

Ticket #4 - Computer running extremely slow

Issue Description: My computer has been really slow the last few days. Everything takes forever to open and sometimes it just freezes. It's driving me crazy.

Troubleshooting performed:

- Restarted my computer
- Closed extra programs

Business Impact:

Takes 5+ minutes to open applications. Significantly impacting work productivity.

1. Contact customer through team chat
2. Ask whether the battery is low? or do you have too many applications open?
3. After confirming with customer, remotely go into desktop and check its setting
4. Storage, update, drive, malware, etc
5. Conclude that the computer was not up to date and proceed to update the computer
6. Check with customer and ensure no other ongoing issues

Ticket #5 - Employee leaving Friday - need everything shut off

Issue Description:

HR requests account deprovisioning for an employee whose last day is this Friday. Need to disable account, reset password, and remove all group memberships per offboarding checklist.

Troubleshooting performed:

- Approved by HR Director
- Employee: Sarah Mitchell
- Username: smitchell
- Department: Marketing
- Last day: This Friday
- Manager has been notified

1. Go to active directory
2. Disable account
3. Reset Password
4. Remove all group membership
5. Inform Manager

Ticket #6 - Internet completely down - cannot access anything

Issue Description:

Internet completely down - cannot access anything

Business Impact:

Cannot access email, cloud apps, or any websites. Work completely halted.

1. Check internet, finds that all the server is running
2. Check ISP, Find that the ETA internet is down for 1 - 2 hour
3. Inform the info to company GC chat

Ticket #7 - VPN disconnected and won't reconnect

Issue Description: VPN disconnected and won't reconnect

Business Impact: Working remotely and lost VPN. Cannot access any internal resources.

1. Contact user and inform of remote desktop support
2. Attempt to reconnect VPN
3. Informs that it needs a cache flush
4. Go to terminal, input "ipconfig /flushdns "
5. Restart computer
6. Reconnect VPN
